

# Ultimate Station middle and upper plates

**READ General Instructions FIRST!**

**TIP:** Most pieces fit together without glue. Do a test run first, before gluing.

**Sheets:** The 2 large plates with the most and the least amount of slits in it. No number.

**Frames & little pieces:**

**Dropper:** UDS1, UDS2

**GW:** UGS1, UGS2

**Storage:** USS1, USS2

**Other parts on these plates are for the low small units, see those instructions.**

I

1 the pieces to be glued, including the 3 little ones.

**do this for the upper and middle plates.**

**Middle plate is the one shown in the picture.**

**It has the most slits in it.**

**Middle plate REQUIRES a cutting mat to work!**

2

2 first place the cutting mat fitting into a frame and mark the corners.

Cut these corners out of the cutting mat with strong scissors or a sharp blade.

3

Tip: weigh down with around 20 KG of weights during glue drying time, so that there are no gaps between the layers!

3 then glue the 3 little connector plates upright into the slots of a large plate. Glue the frame **VERY fittingly on all 3 outside edges onto the large plate and the connector plates.**

Make sure to use the right plate with the right frame. The slits for the connector pieces are in different positions for each.

**Ensure that no glue is visible on the open slits or cutouts. Check both sides.**

Glue the cutting mat in place with e.g. super glue.

**Don't let glue show anywhere!**

4

4 assemble the upper plate the same way.

Make sure that the 2 little cutouts on the sides are once on the left and once on the right side, so the plates can be connected to each other. See setup guide.

**Plates may require a bit of wiggling / pushing to get it in place during assembly of the box.**
