

# Setup Large Station (GW and Dropper)

**READ General Instructions FIRST!**

## **CAUTION: Liquids**

The material for the kits is MDF, which is made from wood.

Do not let any liquids soak into the material!

Always completely empty and dry off the water pots and wet palette before transport.

Ensure all paints are properly closed.

If the surface gets wet, wipe the liquid away quickly.

## CLOSING

**1-3 small drawers:** set the upper part on top of the larger one, so that the side tabs fit into the cutouts. Slide into the small paint unit (grip hole facing outwards).

**Dropper version:** If you want to fit 4 GW paints into the lower part, tilt these forwards into the cutout holes and set the upper part on top. Some wiggling may be needed.

4

5

**4-5 large drawers:** set the upper part on top of the larger one, so that the side tabs fit into the cutouts. Slide into the back of the large paint unit (grip hole facing outwards). Make sure the teeth at the bottom slot into the cutouts of the paint holder, and that it's fully inserted.

**6****7**

GW: sideways

Leave empty during transport

**6-7 closing:** Set all 3 paint units fully into the slots of the bottom plate. (foam feet of bottom plate facing down) . The small stepped units have to face the front (you) with the drawer openings. Also set the water pot storage box into its slots. Make sure nothing sticks out of the boxes; there is NO tolerance for this.

**GW version of the stepped paint units:** The hinges of the paint pots in the middle row of all 3 paint holders have to face sideways, otherwise the middle tool box will not fit. Leave the paint spots just below the key holders empty during transport; otherwise the keys cannot be turned.

**8****9**

**8-9 closing:** set the middle, then the large tool box onto the others. Make sure nothing sticks out of the boxes; there is NO tolerance for this. Make sure the tabs of the box below slot into the holes of the bottom of the upper ones. Slide the brush holder upright into the front part of the boxes (where there is now the long slot all through the boxes)

**GW stepped paint units:** first set up the small and middle tool boxes, then slide the paint units in from the sides, as there is very little space for the paints. This is the easiest way.

11

**10-11 closing:** set the upper plate onto the tabs of the paint holders and tool box. Make sure the tabs are all inserted. A bit of wiggling may be needed. In general, there is absolutely no space for things sticking over the boundaries of boxes and paint holders. If there are any gaps anywhere, check that there is nothing in the way. Slide the handgrip over the station straight from the front. The narrower overhang goes to the bottom, between the feet. It fits tightly. Let station slightly hang over edge of table to make this and turning keys easier. Fully insert the 4 keys. **Front keys have little indentations in the top.** Turn keys 90 degrees to lock (they only can be turned one way)

**DO NOT use force to turn keys. They should just drop in. A bit of wiggling may be needed to get them through all the layers. This gets easier with time.**

## 1-2 Setup:

**Connector plate:** set the front teeth of the large paint unit centered onto the 4 slits of the connector plate.

Insert the water pot holders into the slots left and right of the large paint unit and attach the small paint holders the same way. By reversing the holders, you can achieve different angles, whichever suits you more.

3

4

### 3-4 Setup:

**Connector plate:** set large low drawer unit centered onto the 2 tabs of the connector plate. Use the slots in the center. The grip hole has to face your way.

Insert the tabs at the front of the drawer into the slots of the upper plate / work area.

5

6

## 5-6 Setup:

**Upper drawers:** set the upper drawer parts on top of the edges of the paint units. The small upper drawers can also be set on top of the lower small drawers. Place lower drawers as you please. Use brush holes in the paint units for your brushes.

## STORAGE

1

2

Rise out and completely dry off sponge and wet palette before storing in the Paint Station.

Press sponge in between paper towels several times to get it fully dry.

### 1-2 Storage:

**Water pot storage box:** in this box, place the 2 water pot holders at the bottom. Store the power cable of the lamp inside the water pots and place water pots on top of the water pot holders. Slide the wet palette upright inside the box. Store the connector plate upright inside this box also.

### 3 Lamp storage:

You can store the lamp and holder pieces of the lamp in the upper tool box (in the wide compartment).

**Refer to lamp holder assembly instructions on how to set up the lamp.**
